Select a project...

Base Branch

main

Start typing to see suggestions from your repository

Branch Name (Optional)

feature/new-functionality

Leave empty to auto-generate based on task

Merge Request Title *

Implement new feature or fix

Clear, descriptive title for your merge request0/240

Task Instructions *

Describe what you want the AI agent to accomplish...

Example:
Add user authentication to the login page

Credential Status

Quick Actions

View Recent Tasks

Manage Projects

Help

- Add user authentication to the login page
- Fix the memory leak in the data processing module
- Implement responsive design for mobile devices
- Add unit tests for the payment service

Be specific about requirements, constraints, and expected outcomes

AI Model

GPT-4 Turbo (Recommended)

Reasoning Effort

Medium (Balanced)

Higher effort = more thorough analysis, longer processing time

GitLab PAT Required

A GitLab Personal Access Token is required to create merge requests. Configure it in Settings before submitting tasks.

 Credentials are write-only for security

Personal Access Token

glpat-xxxxxxxxxxxxxxxxxxxxxx

Required scopes: api, read_user, read_repository

Actor (Optional)

operator

Store Token

Verify PAT Access

Clear PAT

Clearing the PAT will prevent new task submissions until reconfigured

Session Bundle JSON

```
{"session_token": "...",
"user_agent": "...",
"cf_clearance": "..."}

```

Upload Bundle File

Choose File

No file chosen

session_bundle.json

Actor (Optional)

operator

Import Session

CLI Commands

```
# macOS:
pbpaste | jq . > session_bundle.json

```

```
# Linux:
xclip -o | jq . >
session_bundle.json

```

```
# Windows:
Get-Clipboard | ConvertFrom-Json >
session_bundle.json

```

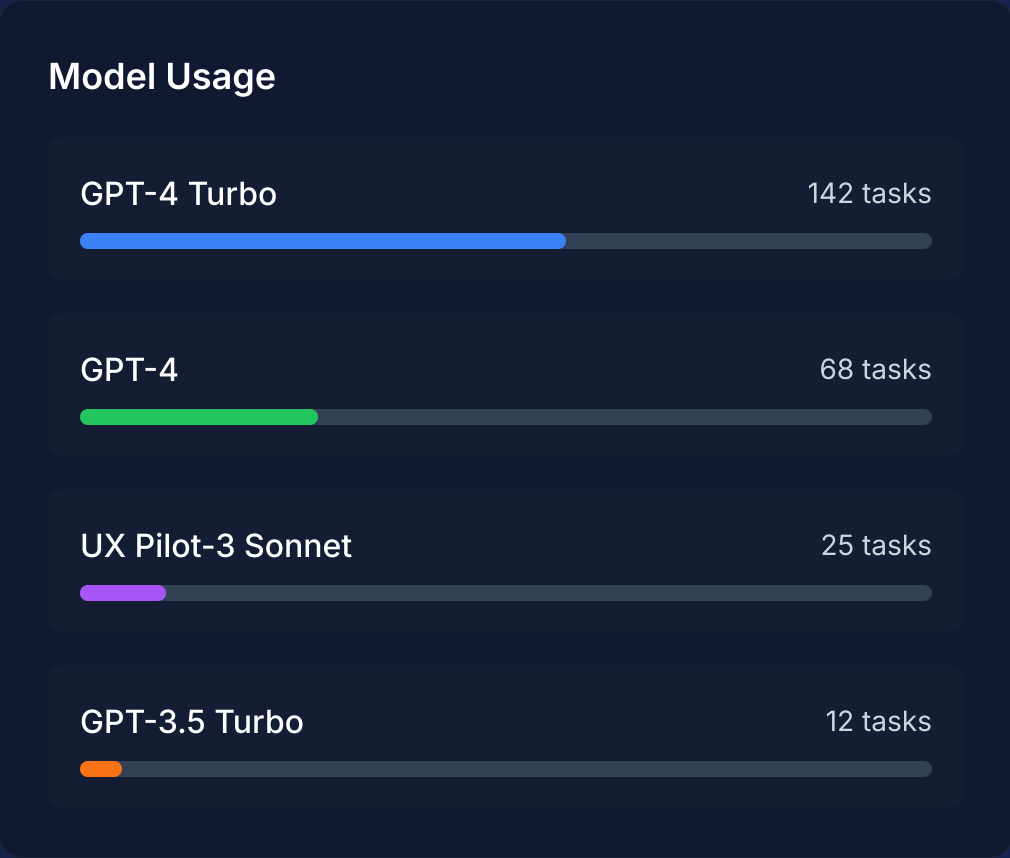

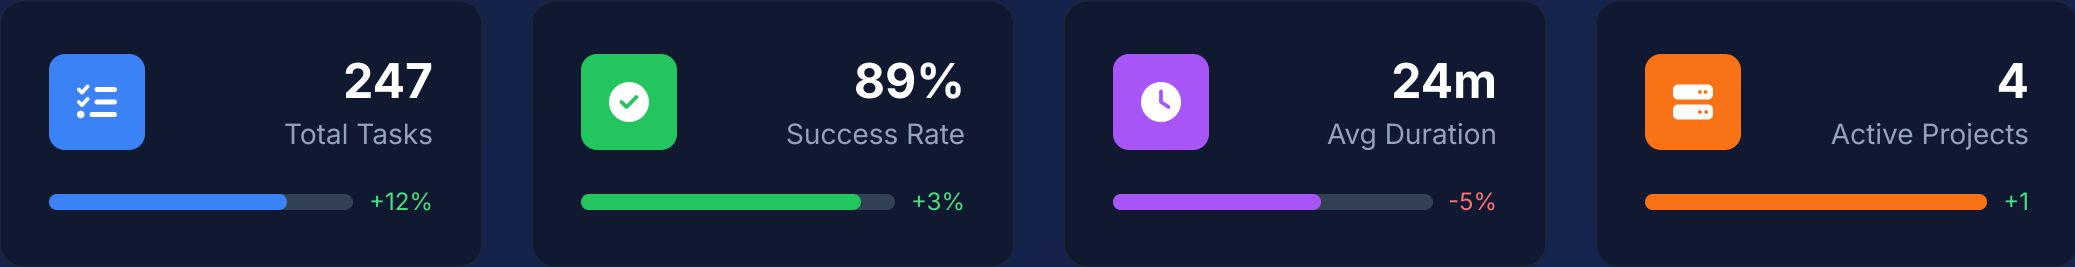

Clear Session Bundle

Clearing will affect Docker-backed task runs
